### DESCRIPTION

The Pack Tower ref.306501 is a structural support for antennas designed to be **installed in an easy way and to last with no maintenance.**

There is no need to do ground works as it can be installed just by screwing the structure to the ground. Its three layers make the transport and storage of the structure easier.

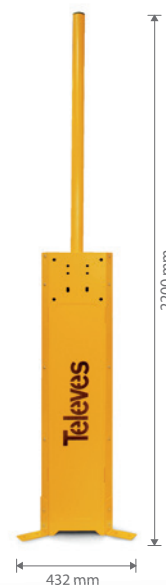

Besides the mast has a pre-configured area to fit a "L" bracket in order to install more antennas if necessary.

The Pack Tower is an interesting solution for single dwellings and for display purposes.

### MAIN FEATURES

- **Versatility.** The structure has plenty of space to erect several antennas. Two installation options: through the integrated mast or through "L" brackets (Compatible with the Televes "L" bracket, ref. 7349)
- **Easy installation.** The installation can be done without any additional ground work as it was designed to be screwed directly to the ground.
- **Compact.** Easy transport and storage.
- **Elegant design.** A inconspicuous solution to hold all the antennas in just one structure.
- **Optimized installation.** The cable system is integrated inside the tower keeping the quality and durability of the TV installation.
- **Plug and Play:** Complete kit with all the accessories needed in the assembly process.

### HIGHLIGHTS

- **Long-lasting life.** Made of galvanized steel and covered with electrostatic polyester powder which guarantees more than 15 years without corrosion. Inox screws.
- **Compact packaging** to save space and avoid problems in transport and storage (264 x 1194 x 82mm).
